Re: Utility Regulator Forward Work Programme (April 2010 – March 2011)

Renewable Energy Systems (RES) is a leading renewable energy company with businesses in Europe, North America and Australia. Part of the privately-owned British Sir Robert McAlpine Group of engineering and construction companies, RES has been at the forefront of wind energy development since the 1970s and is the leading independent developer in the UK. As well as being a pioneer in wind energy, the RES Group is also developing grid-connected power projects using other renewable energy sources and technologies such as concentrated solar and biomass, and is active in a range of renewable energy systems for on-site and building-integrated heat and power generation, including biomass heating, solar (PV and thermal) and ground source hot water, heating and cooling. The Group also has a sustainable buildings consultancy, Inbuilt, which provides technical and consulting excellence in the research, design and delivery of sustainable built environments.

RES is a member of the Irish Wind Energy Association and the British Wind Energy Association, and we are pleased to have the opportunity to respond to this Forward Work Programme and wish to place on record our support for the response provided to you by the Irish Wind Energy Association.

Yours sincerely,

A handwritten signature in blue ink that reads 'Lucy Ford-Hutchinson'.
