1.13.5 Where the Licensee fails to pay the amount of the licence fee as notified to it under Condition 1.13.2 within the 30 day period specified, it shall with effect from the end of that 30 day period pay simple interest on the amount at the rate which is from time to time equivalent to the base lending rate of an institution designated by the Authority for this purpose.

- (ii) the Authority is reasonably satisfied that, due to any process required to be followed by an Applicable Law, which could not reasonably have been further expedited or avoided by the Licensee, the Licensee has been delayed in complying with its obligations under Condition 3.2.1;

Annex 3 to Part 3

GENERAL DEVELOPMENT PLAN

The Licensee has prepared this General Development Plan for the introduction of natural gas to the west of Northern Ireland. The plan reflects the strengths of the Licensee's parent organisation and the Licensee's ambition to establish Scotia Gas Networks Northern Ireland Ltd as a leading network in Northern Ireland's natural gas industry, and brings:

- benchmark standards of health, safety and care for the environment in all aspects of gas conveyance and associated services.
- first class engineering skills in the design, construction, planning, operation, control and maintenance of gas distribution systems.
- experience in comprehensive customer care charters and working with consumer organisations, government agencies and other stakeholder groups affected by gas related activities.
- a proven track record in developing and managing gas connections, in highly competitive GB markets and areas of fuel poverty.
- financial strength.
- extensive experience of procurement and contracting .
- involvement in the transition to modern metering arrangements.
- access to technical know-how in all types of gas utilisation including Combined Heat and Power (CHP) ensuring highest thermal efficiencies and safety.
- long term employment supported by high quality training of local employees.
- experience of operating in a developing regulatory regime.
- access to innovative research in the gas industry with strong links to international technology developers and further education establishments.
- a commitment to ensuring equal opportunities for all.

The Licensee will develop and operate an efficient and economic gas transportation infrastructure in accordance with this plan. It will spread the major benefits of natural gas to the Licensed Area including environmental improvements, local employment, energy efficiency and fuel choice for all sectors of the domestic, commercial and business markets. The developing infrastructure will allow for the introduction of new businesses providing services to the natural gas industry and those dependent upon natural gas as a primary fuel.

The plan assumes the construction of new high pressure pipelines (by the High Pressure Licence holder) which will be supported by the installation of a Distribution Feeder system to supply the Districts included in the Licence. This will be followed by the development of local gas distribution systems that will make natural gas available to domestic, industrial and commercial users.

1. Introduction

The Licensee has the necessary skills to ensure the construction and operation of a safe and economic distribution network that brings the advantages of choice, increased energy competition, convenience and environmental improvements to potential natural gas consumers in western towns in Northern Ireland. The plan concentrates on the provision of natural gas in the towns of Strabane, Dungannon, Coalisland, Cookstown, Magherafelt, Omagh, Enniskillen and Derrylin but does not preclude the Licensee seeking to pursue developments elsewhere within the Licensed Area.

2. Company Structure

The Licensee is a wholly owned subsidiary of SGN Ltd, who own and operate over 74,000km of gas mains in Scotland and the south of England and have the responsibility to deliver gas safely, reliably, and efficiently to 5.8 million customers. The Licensee will operate from a base in Northern Ireland and establish a strong local presence that will be suitably supported by SGN group capabilities. In keeping with Northern Ireland employment legislation and equality guidelines, the Licensee will seek to develop the natural gas industry using employees, contractors and service providers from the local area.

3. Market and Infrastructure Development

The Licensee is mindful of the challenge to establish natural gas in the energy market and to promote confidence in natural gas as a safe alternative energy source within the Licensed

Area. The Licensee will build on the Licensee's group experiences in GB to involve key stakeholders and customer groups to ensure their needs are met and to use their views to inform and influence the Licensee's development and marketing plans. While engaging with local partners from the public and private sectors, the Licensee will also consult with national bodies to shape the Licensee's marketing message and work with other gas transporters and suppliers to more widely promote the natural gas industry in Northern Ireland.

The Licensee will look to build relationships with suppliers, heating installers and other organisations to provide downstream solutions for all sectors of the market, promoting natural gas as the fuel of choice. Proactive engagement with these partners, community groups and representative bodies, will identify areas, households, or businesses that require connections and ensure the Licensee's development plans and infrastructure roll out remain appropriate and reactive to local needs.

4. Organisation

4.1 General Business Approach

Throughout the Licensee's activities the Licensee will operate to the highest standards of safety and customer service. The Licensee will promote operational excellence and a strong focus on communication and commercial management, encouraging collaboration with the Licensee's contractors and suppliers to achieve the most economic construction of the distribution network and the installation of gas equipment and related services.

The Licensee will use the best available technology and draw on the highly successful innovative arrangements the Licensee has developed in collaboration with other industry participants. This practice extends to developments which improve supply and system management as well as collaborative schemes aimed at reducing both the costs and impact of street-works. These schemes encourage collaboration with contractors and suppliers to achieve the most efficient construction of complex distribution systems along with the installation of gas equipment and related services.

4.2 Engineering Work

Wherever possible the low pressure mains and services work will be carried out by local personnel, trained to the required level of competence.

4.3 Control and Emergency Services

The safe operation and maintenance of the distribution system will be the Licensee's first priority. The system will be constantly monitored by electronic sensors at District Pressure Reduction sites with information relayed to a central "grid control". Other key locations will be monitored remotely on a daily basis.

A centre providing a single point of contact for all reported emergency situations from consumers, the general public and developers will be available. The centre will have the responsibility of efficiently managing gas escapes and other emergency situations through interfacing with local management to ensure the dispatch of appropriately skilled resources within the required response times.

Whilst the majority of this work will be carried out by fully trained and approved contractors, a small core team of specialists will be retained to maintain essential pressure control equipment and provide support to the emergency service. Professionally qualified and experienced engineering staff will be employed to co-ordinate non-routine operations involving "live gas" remedial works and to provide a call out service when required.

4.4 Metering

The Licensee will work with gas suppliers to install, manage and maintain a range of metering systems that will comply with licence obligations and meet the needs of gas suppliers and consumers. These will include both standard credit meters and "pay as used" meters for domestic users and meter systems including options for Automatic Meter Reading and Energy Management Systems for some industrial and commercial users.

The Licensee will also respond to fault situations involving metering systems to ensure that the inconvenience associated with unavailability of supply are addressed. This installation and maintenance requires some specialist skills which will be developed by the Licensee.

The Licensee will also provide systems and services to support the smooth transition between suppliers where consumers wish to transfer.

4.5 Domestic Customer Installation Work

Installation work in customer premises is a specialist area. The registration scheme for gas installers (Gas safe) in Northern Ireland is welcomed by the Licensee to facilitate the development of a pool of contractors qualified to work on natural gas installations and appliances. The Licensee will establish an Approved Installers List (AIL) from which customers may select installers to undertake work in their properties.

The Licensee will also establish relationships with gas suppliers, technology providers and organisations promoting energy efficiency to ensure a proactive approach to the provision of gas connections, gas appliances and conversions.

4.6 Industrial and Commercial Service

Encouraging connections within the industrial and commercial sector is important and will be reflected in the Licensee's marketing strategy. Notwithstanding the complexities of providing the connections infrastructure, the Licensee recognises specialist utilisation skills will be required within the sector for both appliance installation and conversion work.

The Licensee will therefore engage with business users to bring together the necessary skills to influence decision making and ensure that the supply and metering installation is co-ordinated with the down-stream installation.

5. Training

To meet the licence obligations and relevant objectives in the Licensed Area requires a highly skilled and competent work-force. To meet that need the Licensee will encourage the employment of local people and ensure that the necessary training and assessment is available.

Training programmes will be developed to ensure that changes in legislative requirements, industry practices, company policies and procedures, Licence Conditions and general employee development requirements are supported.

These programmes will be delivered utilising a range of training options including both internal and external training provision. The Licensee will consider the use of local training providers in Northern Ireland where appropriate to provide the necessary skills training.

PART 4: THE PRICE CONTROL CONDITIONS

Condition 4.1: Charging methodology for the conveyance of gas

- 4.1.1 The price control set out in this Part 4 allows the Licensee to recover Expenditure reasonably expected to be incurred and the designated rate of return, r_t , over the duration of the relevant recovery period.
- 4.1.2 The Licensee shall use all reasonable endeavours to set the Controlled Charges so as to ensure that, in respect of each Formula Year, they satisfy:
- (a) the constraint set out in Condition 4.2 (the “Primary Constraint”); and
 - (b) the constraint set out in Condition 4.3 (the “Supplemental Constraint”).
- 4.1.3 The values attributable to the Primary Constraint and Supplemental Constraint shall from time to time be established following a process of Review in accordance with:
- (a) Condition 4.4 (Periodic Reviews); or
 - (b) Condition 4.7 (Special Reviews),
- but without prejudice to the ability of the Authority to modify those values, or any of the provisions of this Part 4, at any time in accordance with Article 14 and Article 14A of the Order.
- 4.1.4 At the beginning of each Review, the Licensee shall submit to the Authority, in accordance with Conditions 4.5 and 4.6, its best estimate of the values that the Licensee believes the Authority should designate, at the conclusion of the Review, for the purposes of the Primary Constraint and the Supplemental Constraint.
- 4.1.5 The designated values applying from time to time, for the purposes of the Primary Constraint and the Supplemental Constraint, will be those set out in Condition 4.11.
- 4.1.6 Following each Formula Year, the Licensee shall provide information to the Authority in accordance with Condition 4.10, showing whether or not the Controlled Charges for that Formula Year did satisfy the Primary and Supplemental Constraints.
- 4.1.7 Words, phrases and terms of formulae used in this Part 4 shall, where not defined in Condition 1.1 of this Licence, bear the meanings ascribed to them in Condition 4.12.

Condition 4.2: The Primary Constraint

4.2.1 This Condition 4.2 establishes the Primary Constraint.

Purpose and Effect of the Primary Constraint

4.2.2 The principal purpose of the Primary Constraint is to provide that the regulated revenue recovered by the Licensee in any year in respect of each category of customer does not exceed the sum (with reference to the allowed prices established at the completion of the last price control review) that it is allowed to recover in that year in respect of that category of customer.

4.2.3 However, the Primary Constraint allows for the recovery of revenue in excess of the sum allowed in respect of any category of customer in any year (an over-recovery) to the extent that the revenue in respect of the other categories of customer in that year together with revenues in respect of earlier years are less than the sums allowed (an accumulated under-recovery).

4.2.4 The Primary Constraint contains mechanisms which may restrict the extent to which any over-recovery for one category of customer is capable of being set-off against an under-recovery for the other categories of customer

4.2.5 The Primary Constraint also provides that:

- (a) the value of any aggregate under-recovery in respect of earlier years that may be used to offset an over-recovery is calculated after making allowance for a compounding rate of return (subject to a mechanism by which the compounding rate of return may be limited); and
- (b) the value of any aggregate over-recovery in respect of earlier years that must be offset by an under-recovery is calculated after making allowance for a compounding rate of return (subject to a mechanism by which the compounding rate of return may be raised).

The Primary Constraint

4.2.6 The Primary Constraint, in respect of each Formula Year t , is represented by the formula:

$$\sum_{all_i} \max((1 - \delta_{E,t}) \cdot Z_{F,i,t} , Z_{F,i,t}) + Z_{U,t} \leq 0$$

4.2.7 In Condition 4.2.6:

\sum_{all_i} means the summation of the values for each Conveyance Category i ;

$Z_{F,i,t}$ has the meaning given in Conditions 4.2.8 and 4.2.9, and is calculated in accordance with Condition 4.2.10;

$Z_{U,t}$ has the meaning given in Conditions 4.2.25 and 4.2.26 and is calculated in accordance with Condition 4.2.27; and

$\delta_{E,t}$ is the Designated Parameter of that name in respect of Formula Year t , which is established for the purposes set out at Condition 4.2.20 and 4.2.21.

The $Z_{F,i,t}$ Term

4.2.8 The principal purpose of the term $Z_{F,i,t}$ is, in respect of Conveyance Category i for Formula Year t , to:

- (a) establish the value of any:
 - (i) under-recovery of revenue (being the extent to which Actual Revenue is less than Allowed Revenue); or
 - (ii) over-recovery of revenue (being the extent to which Actual Revenue exceeds Allowed Revenue); and
- (b) adjust that value by reference to any under-recovery or over-recovery in respect of that Conveyance Category i accumulated in years prior to Formula Year t .

4.2.9 The effect of the term $Z_{F,i,t}$ is to establish a value for the accumulated under-recovery or over-recovery of revenue in respect of Conveyance Category i up to and including Formula Year t .

Calculating $Z_{F,i,t}$

- 4.2.10 $Z_{F,i,t}$ shall be calculated in accordance with the following formula (where a positive value denotes an over-recovery and a negative value denotes an under-recovery):

$$Z_{F,i,t} = \left((P_{F,i,t} - P_{E,i,t} \frac{RPI_{iy_t}}{RPI_E}) \cdot V_{F,i,t} \cdot \Gamma_{F,t} \right) + \hat{Z}_{F,i,t-1} \cdot (1 + \bar{r}_{t-1})$$

- 4.2.11 For the purposes of Condition 4.2.10:

$P_{F,i,t}$ is the Actual Revenue Per Unit in respect of Conveyance Category i for Formula Year t (which amount cannot, for the avoidance of doubt, be negative);

$P_{E,i,t}$ is the Determined Revenue Per Unit in respect of Conveyance Category i for Formula Year t ;

RPI_{iy_t} is the sum of the values of the Retail Prices Index for each month in Formula Year t divided by twelve (in order to establish a mean value for RPI during that Formula Year);

RPI_E is the Designated Parameter of that name established at the most recent Review (as the base reference point for the Retail Prices Index);

$V_{F,i,t}$ is the Actual Volume in respect of Conveyance Category i for Formula Year t ;

$\Gamma_{F,t}$ has the meaning given in Conditions 4.2.12 and 4.2.13 and is calculated in accordance with Conditions 4.2.14 and 4.2.15; and

\bar{r}_{t-1} has the meaning given in Condition 4.2.16 and 4.2.17 and is calculated in accordance with Condition 4.2.18 and 4.2.19.

$\hat{Z}_{F,i,t-1}$ has the meaning given in Conditions 4.2.22 and 4.2.23 and is calculated in accordance with Condition 4.2.24

The $\Gamma_{F,t}$ Term

4.2.12 The principal purpose of the term $\Gamma_{F,t}$ is, where the volumes of gas conveyed by the Licensee in Formula Year t are higher than those determined at the time of the last Review, to restrict the extent to which the value of any under-recovery of revenue in respect of that year may be counted for the purposes of the Primary Constraint.

4.2.13 The effect of the term $\Gamma_{F,t}$ is, in the circumstances in which it applies, to limit the value of the under-recovery that may be carried forward in proportion to the extent to which the Actual Volume in respect of Formula Year t exceeds the Determined Volume in respect of that year.

Calculating $\Gamma_{F,t}$

4.2.14 The value of $\Gamma_{F,t}$ shall be deemed to be equal to 1 (one), except where both of the following apply:

(a) the Actual Volume in Formula Year t is greater than the Determined Volume in respect of that year, namely:

$$\sum_{all_i} V_{F,i,t} > \sum_{all_i} V_{E,i,t} ; \text{ and}$$

(b) the Actual Revenue for the same Formula Year t is less than the sum of the Allowed Revenues for each Conveyance Category and that year when multiplied by $\frac{RPI_{iy_t}}{RPI_E}$ (in order to adjust the Allowed Revenue for the effect of inflation), namely:

$$\sum_{all_i} \left(\left(P_{F,i,t} - P_{E,i,t} \frac{RPI_{iy_t}}{RPI_E} \right) \cdot V_{F,i,t} \right) < 0$$

4.2.15 Where both paragraphs (a) and (b) of Condition 4.2.14 apply, the value of $\Gamma_{F,t}$ shall be calculated in accordance with the following formula:

$$\Gamma_{F,t} = \frac{\sum_{all_i} V_{E,i,t}}{\sum_{all_i} V_{F,i,t}}$$

for the purposes of which:

$V_{F,i,t}$ is the Actual Volume in respect of Conveyance Category i and Formula Year t ; and

$V_{E,i,t}$ is the Determined Volume in respect of Conveyance Category i and Formula Year t .

The \bar{r}_{t-1} Term

4.2.16 The principal purpose of the term \bar{r}_{t-1} is to adjust the value of any accumulated under-recovery or over-recovery in relation to Formula Year $t-1$ (when such accumulated under-recovery or over-recovery is being carried forward for the purposes of the Primary Constraint) by reference to the rate of return applying in respect of that year.

4.2.17 The secondary purpose of the term \bar{r}_{t-1} is to provide a mechanism by which the rate of return applying for the purpose described in Condition 4.2.16 may be adjusted so as:

- (a) to either increase or decrease the value of any accumulated under-recovery or over-recovery of revenue that is carried forward; and
- (b) thereby to provide an incentive or disincentive (as the case may be) in respect of the accumulation of such under-recovery or over-recovery of revenue.

4.2.18 The value of \bar{r}_{t-1} shall be calculated in accordance with the following formulae:

(a) where
$$\sum_{all_i} Z_{F,i,t-1} + Z_{U,t-1} \geq 0$$

then
$$\bar{r}_{t-1} = ((1 + r_{E,t-1}) \cdot \frac{RPIiy_t}{RPIiy_{t-1}}) - 1 + x_{O,t-1}$$

(b) where $\sum_{all_i} Z_{F,i,t-1} + Z_{U,t-1} < 0$

then $\bar{r}_{t-1} = LIBOR_{1year,t-1} + 0.02 - x_{U,t-1}$

4.2.19 For the purposes of Condition 4.2.18:

\sum_{all_i} means the summation of the values for each Conveyance Category i ;

$r_{E,t-1}$ is the designated rate of return in respect of Formula Year $t-1$;

$LIBOR_{1year,t-1}$ is the average GBP interbank lending rate with a 12 month period of maturity during Formula Year $t-1$. Calculated by averaging the 1 year LIBOR rates in GBP, on the 15 February, 15 May, 15 August and 15 November of year $t-1$; if LIBOR is not set on any of these days then the last figure set before the day is used;

$x_{O,t-1}$ is a Designated Parameter that applies in respect of Formula Year $t-1$, being the mechanism by which the increase referred to in Condition 4.2.17 may be achieved in respect of the value of any accumulated over-recovery of revenue to be carried forward from that year; and

$x_{U,t-1}$ is a Designated Parameter that applies in respect of Formula Year $t-1$, being the mechanism by which the decrease referred to in Condition 4.2.17 may be achieved in respect of the value of any accumulated under-recovery of revenue to be carried forward from that year.

The $\delta_{E,t}$ Term

4.2.20 The purpose of the term $\delta_{E,t}$ is to provide a mechanism by which:

- (a) the value of any under-recovery of revenue in respect of Conveyance Category i and Formula Year t may, for the purpose of the Primary Constraint, be subject to reduction; and

- (b) in consequence of that reduction, there is a limitation on the extent to which the value of any over-recovery in respect of a different Conveyance Category i for the same Formula Year t may be set-off under the Primary Constraint.

4.2.21 The effect of the term $\delta_{E,t}$, if it is determined as a value greater than zero, is to restrict the extent to which under the Primary Constraint an under-recovery of revenue in one Conveyance Category may be set-off against an over-recovery of revenue in any other Conveyance Category.

The $\hat{Z}_{F,i,t-1}$ Term

4.2.22 The principal purpose of the term $\hat{Z}_{F,i,t-1}$ is, in respect of Conveyance Category i for Formula Year $t-1$, to secure that the Licensee is not retrospectively disadvantaged in the event that $\delta_{E,t}$ is designated (e.g. at a Periodic Review) to be greater than $\delta_{E,t-1}$. Such a disadvantage would otherwise arise since the increase in $\delta_{E,t}$ would, other things being equal, have the effect of increasing the calculated value of the term in Condition 4.2.6 (the Primary Constraint) and thus may require the Licensee to take remedial action that would otherwise not be necessary.

4.2.23 The effect of the term $\hat{Z}_{F,i,t-1}$ is to establish an adjusted value of any accumulated under-recovery or over-recovery of revenue up to and including Formula Year $t-1$ attributed to Conveyance category i in the event that $\delta_{E,t}$ is designated to be greater than $\delta_{E,t-1}$. The residual value of such adjustments are separately accumulated in the unallocated term $Z_{U,t}$ described in Condition 4.2.25 and 4.2.26 and calculated in accordance with 4.2.27.

Calculating $\hat{Z}_{F,i,t-1}$

4.2.24 $\hat{Z}_{F,i,t-1}$ shall be calculated in accordance with the following formula (where a positive value denotes an over-recovery and a negative value denotes an under-recovery):

If $\delta_{E,t}$ is designated to be greater than $\delta_{E,t-1}$:

$$\hat{Z}_{F,i,t-1} = Z_{F,i,t-1} \cdot \frac{\delta_{E,t-1}}{\delta_{E,t}}$$

Otherwise:

$$\hat{Z}_{F,i,t-1} = Z_{F,i,t-1}$$

The $Z_{U,t}$ Term

- 4.2.25 The principal purpose of the term $Z_{U,t}$ is to accumulate the net value of adjustments in respect of all Conveyance Categories i calculated in accordance with Condition 4.2.24 so that the calculated value of the term in Condition 4.2.6 (the Primary Constraint) is not retrospectively affected in the event that $\delta_{E,t}$ is designated to be greater than $\delta_{E,t-1}$.
- 4.2.26 The effect of the term $Z_{U,t}$ is to establish a value for the accumulated under-recovery or over-recovery of revenue that is not attributed to any Conveyance Category i in Formula Year t on account of adjustments made in accordance with Condition 4.2.24, taking into account:
- (a) the value of $Z_{U,t-1}$ accumulated up to Formula Year $t-1$, i.e. before taking into account adjustments in the calculation of $\hat{Z}_{F,i,t-1}$ in accordance with Condition 4.2.24 on account of the designated value of $\delta_{E,t}$;
 - (b) the residual value of adjustments in the calculation of $\hat{Z}_{F,i,t-1}$ in accordance with Condition 4.2.24; and
 - (c) the effects of indexation and the rate of return on the value carried forward to Formula Year t .

Calculating $Z_{U,t}$

- 4.2.27 $Z_{U,t}$ shall be calculated in accordance with the following formula (where a positive value denotes an over-recovery and a negative value denotes an under-recovery):

$$Z_{U,t} = \left(\sum_{all_i} (Z_{F,i,t-1} - \hat{Z}_{F,i,t-1}) + Z_{U,t-1} \right) \cdot (1 + \bar{r}_{t-1}) \frac{RPIiy_t}{RPIiy_{t-1}}$$

Further adjustments to $Z_{F,i,t}$ and $Z_{U,t}$

- 4.2.28 In respect of any Formula Year t , the Licensee may propose and the Authority may, at its discretion, accept further adjustments to $Z_{F,i,t}$ such that the effect of those adjustments is neutral in respect of the operation of the Primary Constraint. In the event of such adjustments being proposed and accepted in respect of Formula Year t , the values of $Z_{F,i,t}$ and $Z_{U,t}$ in all subsequent years' calculations shall be deemed to be the values after adjustments under this Condition. The operation of the Primary Constraint is not dependent on any such adjustments being made. Appropriate adjustments may include the reallocation of the value of $Z_{U,t}$ (which would generally be negative and have the effect of offsetting a positive $Z_{F,i,t}$ in the calculation of the Primary Constraint) to any $Z_{F,i,t}$ which are expected to remain positive.

Condition 4.3: Supplemental Constraint

4.3.1 This Condition 4.3 establishes the Supplemental Constraint

Purpose and Effect of the Supplemental Constraint

4.3.2 The purpose of the Supplemental Constraint is to provide that the total regulated revenue recovered by the Licensee in any year does not exceed the sum that it is allowed to recover in that year (as established at the completion of the last price control review) by more than a fixed margin set at that review.

4.3.3 The effect of the Supplemental Constraint is to limit the ability of the Licensee to set its charges so as to give rise to an aggregate over-recovery of revenue, notwithstanding that it may have accumulated an under-recovery in previous years against which that over-recovery may be set-off for the purposes of the Primary Constraint.

The Supplemental Constraint

4.3.4 The Supplemental Constraint, in respect of each Formula Year t , is represented by the formula:

$$\sum_{all_i} (P_{F,i,t} \cdot V_{F,i,t}) \leq (1 + \alpha_{E,t}) \cdot \sum_{all_i} (P_{E,i,t} \cdot V_{F,i,t}) \frac{RPI_{iy_t}}{RPI_E}$$

4.3.5 For the purposes of Condition 4.3.4:

\sum_{all_i} means the summation of the values for each Conveyance Category i ;

$P_{F,i,t}$ is the Actual Revenue Per Unit in respect of Conveyance Category i for Formula Year t ;

$V_{F,i,t}$ is the Actual Volume in respect of Conveyance Category i for Formula Year t ;

$P_{E,i,t}$ is the Determined Revenue Per Unit in respect of Conveyance Category i for Formula Year t ;

RPI_{iy_t} is the sum of the values of the Retail Prices Index for each month in Formula Year t divided by twelve (in order to establish a mean value for RPI during that Formula Year);

RPI_E is the Designated Parameter of that name established at the most recent Review (as the base reference point for the Retail Prices Index);

$\alpha_{E,t}$ is the Designated Parameter of that name in respect of Formula Year t , which is established for the purpose set out at Condition 4.3.6.

The $\alpha_{E,t}$ Term

4.3.6 The purpose of the term $\alpha_{E,t}$ is to establish the maximum permitted extent by which the sum of the Actual Revenues in respect of each Conveyance Category i and Formula Year t may exceed the sum of the Allowed Revenues in respect of each such category and that year (the over-recovery).

4.3.7 The effect of $\alpha_{E,t}$, where it is set at a value above zero, is to permit an aggregate over-recovery of revenue in any Formula Year but to limit it to a level determined by the value attributed to $\alpha_{E,t}$.

Interaction of the Primary and Supplemental Constraints

4.3.8 The Primary Constraint may allow the Licensee to recover under-recoveries in revenue and because the Primary Constraint cannot constrain the speed with which the Licensee makes corresponding over-recoveries in revenue, the Supplemental Constraint may be set to limit the extent to which the Licensee can make an over-recovery in revenue in any one Formula Year.

Condition 4.4: Review Process & Disapplication Notices

- 4.4.1 This Condition 4.4 sets out the process by which the core terms of the price control will be established by the Authority from time to time.

The Review

- 4.4.2 The Designated Parameters and the Determination Values applying in respect of each Formula Year t will be established in accordance with the process set out below (a “Review”).
- 4.4.3 A Review will take place:
- (a) at scheduled intervals by reference to the end of Formula Year $t=n$ (a “Periodic Review”); and
 - (b) from time to time in accordance with Condition 4.7 (a “Special Review”).

Terms Relevant to Reviews

- 4.4.4 In respect of each Review (the “current Review”):

- n is a Designated Parameter established (subject to Condition 4.7.2) by virtue of the preceding Review, and denotes the last Formula Year before new Determination Values and Designated Parameters are to be established as part of the current Review;
- q is a Designated Parameter established by virtue of the preceding Review, and denotes the Formula Year up to which Best Available Values must be submitted in accordance with Condition 4.5 and 4.6;
- m denotes the Formula Year identified by the Designated Parameter n applicable during the preceding Review (and, accordingly, $t = m$ for any Review is the same as $t = n$ for the preceding Review); and
- a denotes the most recent Formula Year for which the Licensee has submitted Actual Values in accordance with Condition 4.10.

The First Periodic Review

4.4.5 Notwithstanding the other provisions of this Condition 4.4, the following provisions shall apply to the first Periodic Review alone:

- (a) for the purposes of the first Periodic Review, the Designated Parameter n shall be deemed to be the year ending on 31 December 2017;
- (b) unless and until they are modified, any Designated Parameters set out in Condition 4.11 at the time of Grant will be deemed to have been established as such at the first Periodic Review;
- (c) the Licensee shall provide to the Authority, by 30 June 2015 (or such later date as the Authority may agree) the Best Available Values for the first Periodic Review (calculated in accordance with Conditions 4.5 and 4.6) based on such proposed values of the Designated Parameters for the first Periodic Review as are notified to it by the Authority;
- (d) the value of TRV_n used for the purposes of the first Periodic Review (the opening asset value), shall be a value approved by the Authority as reflecting:
 - (i) that Capital Expenditure and Operating Expenditure indicated in the Application Pack, where relevant, as to be incurred by the Licensee in the period up to 1 January 2018, and which is reasonably incurred by the Licensee during that period,

minus

- (ii) any revenue received by the Licensee, whether in respect of the conveyance of gas through the Network (or any part of it) or otherwise, during the period up to 1 January 2018,

(adjusted for cost of capital at the rate of $LIBOR_{1year,t-1} + 0.5\%$, where $LIBOR_{1year,t-1}$ is the average GBP interbank lending rate with a 12 month period of maturity during Formula Year $t-1$, calculated by averaging the 1 year LIBOR rates in GBP, on the 15 February, 15 May, 15 August and 15

November of year $t-1$; if LIBOR is not set on any of these days then the last figure set before the day is used);

- (e) the Authority will, for the purposes of the first Periodic Review and having considered any Best Available Values submitted by the Licensee, determine the Determination Values and Designated Parameters to apply in those Formula Years t occurring during the period $t = 1$ to $t = q$ (inclusive) for the first Periodic Review by modifying Condition 4.11 in accordance with Articles 14(8) – (10) of the Order prior to 1 January 2018.

Periodic Reviews Generally

- 4.4.6 The Authority will, at each Review, determine the Determination Values and the Designated Parameters that apply in those Formula Years t occurring during the period $t = n+1$ to $t = q$ (inclusive) for that Review.
- 4.4.7 The Licensee shall provide to the Authority the Best Available Values (calculated in accordance with Conditions 4.5 and 4.6) in respect of each Periodic Review, together with the Licensee's proposed Designated Parameters for that Review, by whichever of the following dates occurs first:
 - (a) the date which falls 18 months prior to the end of each Formula Year $t = n$;
or
 - (b) where the Authority provides to the Licensee its proposed values of the Designated Parameters for that Review, the date which falls two months after those values are provided.
- 4.4.8 For each Special Review and in accordance with the timetable established by the Authority in accordance with Condition 4.7.6, the Licensee shall (to the extent directed to do so by the Authority in accordance with Condition 4.7.6) provide to the Authority Best Available Values for that Special Review (calculated in accordance with Conditions 4.5 and 4.6) and the Licensee's proposed Designated Parameters for that Special Review.
- 4.4.9 At the same time as it submits Best Available Values to the Authority in accordance with Condition 4.4.5(c), 4.4.7 or 4.4.8 (as applicable), the Licensee shall also provide

such further accompanying information, evidence and other data with regard to the values submitted and the assumptions underlying the relevant estimates and forecasts as will be reasonably sufficient to enable the Authority to be satisfied that the Best Available Values have been provided on a proper and consistent basis. The Licensee shall thereafter provide the Authority with any further such information, evidence or other data requested by the Authority.

- 4.4.10 The Authority will, at the conclusion of each Review and having considered any Best Available Values and proposed Designated Parameters submitted by the Licensee, determine the Determination Values and the Designated Parameters by modifying Condition 4.11 in accordance with Articles 14(8) – (10) of the Order. Such Determination Values and Designated Parameters shall be established having regard to any information provided to the Authority and any representations made to the Authority, including those previously made by the Licensee.

Disapplication

- 4.4.11 This Part 4 (the "Price Control Conditions") shall apply so long as this Licence continues in force but shall cease to have effect (in whole or in part, as the case may be) if the Licensee delivers to the Authority a request (a "Disapplication Request") made in accordance with Condition 4.4.13 and:

- (a) the Authority agrees in writing to the request; or
- (b) the application of the Price Control Conditions (or any part of them) is terminated by a notice (a "Disapplication Notice") given by the Licensee in accordance with Condition 4.4.14.

- 4.4.12 Save where the Authority otherwise agrees, no disapplication following delivery of a Disapplication Request shall have effect earlier than the date (the "Disapplication Date") which is the later of:

- (a) the date occurring 18 months after delivery of the Disapplication Request; and

- (b) the date 6 months after the end of the Formula Year denoted by the Designated Parameter n applying at the date the Disapplication Request was delivered.

4.4.13 A Disapplication Request pursuant to this Condition 4.4.13 shall:

- (a) be in writing addressed to the Authority;
- (b) specify the Price Control Conditions, or any part of them to which the request relates; and
- (c) state the date from which the Licensee wishes the Authority to agree that the Price Control Conditions or the specified part of them shall cease to have effect, which shall not be earlier than the Disapplication Date.

4.4.14 A Disapplication Notice pursuant to this Condition 4.4.14:

- (a) may be given in the circumstances described in either Condition 4.4.15 or Condition 4.4.16; and
- (b) where it is given, shall:
 - (i) be in writing addressed to the Authority;
 - (ii) specify the Price Control Conditions, or any part of them (which shall comprise only such part as was specified in the Disapplication Request) to which the notice relates; and
 - (iii) state the date from which the Licensee wishes the notice to take effect, which shall not be earlier than the Disapplication Date.

4.4.15 The circumstances described in this Condition 4.4.15 are that, by the beginning of the period of six months which will end with the Disapplication Date, the Authority has not in response to the Disapplication Request published a decision under Article 14(8) of the Order to modify:

- (a) the Price Control Conditions, or any part of them to which the request relates; or

- (b) Conditions 4.4.11 to 4.4.16, so as to remove the right of the Licensee to give to the Authority a Disapplication Notice.

4.4.16 The circumstances described in this Condition 4.4.16 are that:

- (a) by no later than the beginning of the period of six months which will end with the Disapplication Date, the Authority has in response to the Disapplication Request published a decision of a type referred to in Condition 4.4.15;
- (b) the Licensee has exercised its right to appeal to the CMA against that decision in accordance with Article 14B of the Order;
- (c) the CMA has, in respect of the provisions to which the Disapplication Request relates:
 - (i) quashed the decision of the Authority under Article 14E(2)(a) of the Order; and
 - (ii) neither remitted the matter back to the Authority under Article 14E(2)(b) of the Order nor substituted its own decision for that of the Authority under Article 14E(2)(c) of the Order; and
- (d) no more than 30 days has elapsed since the date on which the CMA quashed the decision of the Authority.

Closing Regulatory Value

4.4.17 If $DAV_{E,t=q} > 0$, this value shall be returned to the Licensee in those Formula Years following $t = q$, in accordance with the principles determined by the Authority at that time, such principles to provide (inter alia) for an allowed rate of return.

Condition 4.5: Establishing the Best Available Values

4.5.1 The Licensee shall submit Best Available Values to the Authority at each Review in accordance with Condition 4.4 for each past, current and future Formula Year t up to and including $t = q$ for that Review. The Licensee shall submit Actual Values in respect of the Best Available Values for the Formula Years up to $t=a$, and shall use all reasonable endeavours to make its best estimate or forecast of the Best Available Values submitted in respect of the Formula Years from $t=a+1$ to $t=q$ (inclusive).

4.5.2 The Best Available Values are:

$V_{B,i,t}$ Best Available Volume in Formula Year t for Conveyance Category i ;

$C_{B,t}$ Best Available Capital Expenditure in Formula Year t ;

$C_{B,i,t}$ in Formula Year t and for Conveyance Category i , that proportion of Best Available Capital Expenditure in that Formula Year attributable to that Conveyance Category, using a methodology or methodologies approved by the Authority;

$O_{B,t}$ Best Available Operating Expenditure in Formula Year t ;

$O_{B,i,t}$ in Formula Year t and for Conveyance Category i , that proportion of Best Available Operating Expenditure in that Formula Year attributable to that Conveyance Category, using a methodology or methodologies approved by the Authority;

$D_{B,t}$ Best Available Annual Depreciation in Formula Year t ;

$RPIye_{B,t}$ the Best Available value of the Retail Prices Index for the last month of that Formula Year; and

$RPIy_{B,t}$ the sum of the Best Available values of the Retail Prices Index for each month in that Formula Year, divided by 12 (which gives a Best Available average value across that Formula Year).

$$\sum_{t=m}^{t=n} UAC_{B,t}$$

the Best Available Uncertainty Mechanism Capex Adjustment total, to be calculated at the end of year n for years $t=m$ to $t=n$, applied to the DAV in the relevant year of occurrence, t , with applicable rate of return applied to the end of year n (this will include actual values from year $t=m$ to year $t=n-1$ and best available values will be used for year $t=n$, which will be updated to the actual value at the point of the next review period).

$$\sum_{t=m}^{t=n} UAO_{B,t}$$

the Best Available Uncertainty Mechanism Opex Adjustment total, to be calculated at the end of year n for years $t=m$ to $t=n$, applied to the Profile Adjustment, with applicable rate of return applied to the end of year n to ensure consideration is given to the year in which the adjustment occurred (this will include actual values from year $t=m$ to year $t=n-1$ and best available values will be used for year $t=n$, which will be updated to the actual value at the point of the next review period).

- 4.5.3 To the extent the Best Available Values comprise monetary amounts, the Licensee shall express each such value in constant price terms (calculated in accordance with this Condition 4.5.3). For each of the Best Available Values submitted in respect of Formula Years $t=a+1$ to $t=q$ (inclusive), constant price terms shall mean that such forecasted values are all stated in the same money of the day terms as at the time they are all forecasted. For each of the Best Available Values submitted in respect of Formula Years up to $t=a$, constant price terms shall mean that such Actual Values are all converted to the same money of the day terms, by multiplying them by:

$$\frac{RPI_B}{RPI_{iy_{B,t}}}$$

Where RPI_B is the Licensee's proposed value for that Designated Parameter, to apply to each of the Formula Years that are the subject of the current Review. It is the base reference point for the Retail Prices Index and will reflect the money of the day terms in which those Best Available Values that are forecasts were forecasted.

Condition 4.6: Establishing Best Available Revenue Per Unit

- 4.6.1 In addition to the Best Available Values referred to in Condition 4.5.2, the Licensee shall also (again in accordance with Condition 4.4) submit Best Available Revenue Per Unit values for each Review for each Formula Year t that is to occur during the period $t = n+1$ to $t = q$ (inclusive) for that Review. The Licensee shall use all reasonable endeavours to make its best estimate of the Best Available Revenue Per Unit for each Conveyance Category and for each such Formula Year ($P_{B,i,t}$).
- 4.6.2 This Condition 4.6 sets out the Best Available Value categories and the underlying calculations upon which the Licensee should base its values of $P_{B,i,t}$. In compliance with its obligation under Condition 4.4, the Licensee shall submit full workings of the calculations and figures upon which its values of $P_{B,i,t}$ are based.
- 4.6.3 The Licensee shall estimate values for the Best Available Revenue Per Unit ($P_{B,i,t}$) so that:
- (a) such values comply with the requirements set out in Condition 4.6.4;
 - (b) such values reasonably reflect the differences in the respective costs of conveying gas for each of the Conveyance Categories, with reference to, without limitation, $C_{B,i,t}$ and $O_{B,i,t}$;
 - (c) the values (being, by virtue of Condition 4.5.3, values stated in constant price terms) for each Conveyance Category i will not, unless otherwise agreed with the Authority, differ between Formula Years t .
- 4.6.4 Each value of $P_{B,i,t}$ shall be set so that the cash flow (adjusted to reflect the allowed rate of return) over the Formula Years in question is equal to the difference between the regulatory value at the end of Formula Year n of those assets acquired through Capital Expenditure and their depreciated value at the end of Formula Year q . This will be shown to be the case where the values of $P_{B,i,t}$ secure the following net present value result:

$$\sum_{t=n+1}^q \left(F_{B,t} \left(\frac{1 + r_{B,t} \cdot f_{B,t}}{(1 + r_B)^{t-n}} \right) \right) - TRV_{B,n} + \frac{DAV_{B,q}}{(1 + r_B)^{q-n}} = 0$$

4.6.5 For the purposes of Condition 4.6.4, the following terms shall have the following meanings:

n, q are Formula Years as defined in Condition 4.4.4 for the Review that $P_{B,i,t}$ is being forecast as part of. As the value of the Designated Parameter q for that Review is also being established as part of that Review, it will necessarily be the Licensee's proposed value of that Designated Parameter;

$\sum_{t=n+1}^q$ is the summation of data in respect of all Formula Years t from $t = n+1$ to $t = q$ inclusive;

$F_{B,t}$ is the Best Available Cash Flow for Formula Year t , (being a sum calculated in accordance with Condition 4.6.6);

$r_{B,t}, r_B$ is the Licensee's proposed value of the Designated Parameter for rate of return to apply to each of the Formula Years within the relevant period. Provided that, where the Licensee does not propose the same value for each of the relevant Formula Years, $(1 + r_B)^{t-n}$ shall be replaced with $(1 + r_{B,n+1}) \cdot (1 + r_{B,n+2}) \dots (1 + r_{B,t})$ and $(1 + r_B)^{q-n}$ shall be treated accordingly;

$f_{B,t}$ is the Licensee's proposed value of the Designated Parameter f to apply to Formula Year t , where f is an averaging factor (of between zero and one) to be applied to the rate of return, in recognition of the fact that the rate of return is being applied to an end of Formula Year value, but will in practice be recovered over the course of a Formula Year;

$DAV_{B,t}$ is the Best Available Depreciated Asset Value for Formula Year t (being a sum calculated in accordance with Condition 4.6.7); and

$TRV_{B,n}$ is, the Best Available Total Regulatory Value at the end of Formula Year $t = n$ for that Review (being a sum calculated in accordance with Condition 4.6.8).

Calculating $F_{B,t}$ (Cash Flow)

4.6.6 $F_{B,t}$ is an amount equal to the sum of the Best Available Conveyance Revenues for all of the Conveyance Categories and the relevant Formula Year, less the Best Available Capital Expenditure for that Formula Year, less the Best Available Operating Expenditure for that Formula Year, which shall be calculated as follows:

$$F_{B,t} = \sum_{all_i} (P_{B,i,t} \cdot V_{B,i,t}) - C_{B,t} - O_{B,t}$$

Calculating $DAV_{B,t}$ (Depreciated Asset Value)

4.6.7 $DAV_{B,t}$ is an amount equal to the indexed, depreciated, rolled forward value of Capital Expenditure to date, measured at the end of each Formula Year. In respect of Formula Year t therefore, it shall be the value of such amount applying to Formula Year $t-1$, plus the Best Available Capital Expenditure in Formula Year t , less the Best Available Annual Depreciation in Formula Year t , which shall be calculated as follows:

$$DAV_{B,t} = DAV_{B,t-1} + C_{B,t} - D_{B,t}$$

provided that the Licensee shall, in forecasting $DAV_{B,t-1}$ and $DAV_{B,t}$ for any previous Formula Years, ensure that its forecasts are consistent with the Authority's most recent determinations of the Determined Depreciated Asset Value, so that:

$$DAV_{B,a} = DAV_{E,a} \frac{RPI_B}{RPI_E}$$

Where a denotes a Formula Year as defined in Condition 4.4.4.

Where $DAV_{B,t-1}$ includes all Uncertainty Mechanism Capex adjustments up to year t-1.

The Uncertainty Mechanism Capex Adjustment is calculated by the authority at the end of year n , with applicable rate of return applied, in respect of Capex items (this will include actual values as far as possible and estimates for any year(s) in which actual values are not available). Adjustments will be made in the year in which they relate to, for the purposes of depreciation in the DAV.

Calculating $D_{B,t}$ (Depreciation)

$D_{B,t}$ Is the Best Available depreciation calculated each year on the assets of the Licensee in accordance with any depreciation policy determined by the Authority. This depreciation policy will define the asset life for each class of capital assets (for example mains, services, meters, IT, other capex). The depreciation will be calculated on a straight line basis on the sum of the indexed capital expenditure to date in each category that has not yet exceeded its asset life.

Calculating $TRV_{B,n}$ (Total Regulatory Value)

- 4.6.8 $TRV_{B,n}$ is the Best Available Total Regulatory Value at the end of Formula Year $t = n$ for the Review in question. It is the sum of the Best Available Depreciated Asset Value for Formula Year $t = n$ (or in other words the opening position at the beginning of Formula Year $t = n+1$), plus any rolling incentive adjustments, which shall be calculated as follows:

$$TRV_{B,n} = DAV_{B,n} + DA_B + PA_B + ORI_B + CRI_B$$

Where:

PA_B is the Profile Adjustment (being an adjustment calculated in accordance with Condition 4.6.9);

ORI_B is the Operating Rolling Incentive (being an incentive calculated in accordance with Condition 4.6.10); and

CRI_B is the Capital Rolling Incentive (being an incentive calculated in accordance with Condition 4.6.11).

DA_B is an adjustment to take account of any difference between actual depreciation and depreciation allowed in the calculation of allowed revenues up to year n and is calculated as:

$$DA_B = \sum_{t=0}^n \left(D_{B,t} - D_{E,t} \cdot \frac{RPI_B}{RPI_E} \right)$$

Calculating the Profile Adjustment

4.6.9 The Profile Adjustment is an adjustment to reflect the long-term nature of the price control set out in this Condition 4. The Determined Revenue Per Unit values are established at each Review by reference to the period to Formula Year t=q and not by reference to the period to Formula Year t=n. At each Review therefore, it is necessary to recognise the financial impact of having set a deferred recovery profile at the previous Reviews, by carrying forward the deferred value. The Best Available Profile Adjustment for each Review shall be calculated as follows:

$$PA_B = - \left(\begin{aligned} & \sum_{t=m+1}^n F_{E,t} \cdot (1 + r_{E,t} \cdot f_{E,t}) \cdot (1 + r_E)^{n-t} \\ & - TRV_{E,m} \cdot (1 + r_E)^{n-m} \\ & + DAV_{E,n} \\ & + \sum_{t=m}^n UAO_{B,t} \cdot (1 + r_{E,t} \cdot f_{E,t}) \cdot (1 + r_E)^{n-t} \end{aligned} \right) \cdot \frac{RPI_B}{RPI_E}$$

where:

m, n are Formula Years as defined in Condition 4.4.4 for the Review in question;

$\sum_{t=m+1}^n$ is the summation of data in respect of all Formula Years from m+1 to n (inclusive);

$F_{E,t}$, $r_{E,t}$, $f_{E,t}$, $TRV_{E,m}$, and $DAV_{E,n}$ are Determination Values and Designated Parameters established by the Authority at the previous Review in respect of Formula Years t, m or n (respectively);

r_E is the Designated Parameter for rate of return that applies to each of the Formula Years within the relevant period. Provided that, where the Authority did not establish the same value for each of the relevant Formula Years, $(1+r_E)^{n-t}$ shall be replaced with $(1+r_{E,t+1}) \cdot (1+r_{E,t+2}) \dots (1+r_{E,n})$ and $(1+r_E)^{n-m}$ shall be treated accordingly.

$\sum_{t=m}^{t=n} UAO_{B,t}$ is the Best Available Uncertainty Mechanism Adjustment total in respect of Opex items up to year n (this will include actual values for years $t=m$ to $t=n-1$ and estimates for year $t=n$, which will be replaced with the actual value at the time of the next review period).

The Uncertainty Mechanism Opex Adjustment is calculated by the Authority at the end of year n, with applicable rate of return applied, in respect of Opex items (this will include actual values for years $t=m$ to $t=n-1$ and estimates for year $t=n$, which will be replaced with the actual value at the time of the next review period).

Calculating the Operating Rolling Incentive

- 4.6.10 The Operating Rolling Incentive is an incentive that guarantees the Licensee a specific number of Formula Years (w) of benefit in respect of any savings in Controllable Operating Expenditure regardless of when the saving is made. Where Formula Year n+1 occurs before the Licensee has had w Formula Years of benefit from any saving in Controllable Operating Expenditure, the Operating Rolling

Incentive therefore adds to the total regulatory value an amount equal to that saving in Controllable Operating Expenditure that would have been made in the remaining Formula Years of period w. Where Formula Year n+1 occurs after the Licensee has had w Formula Years of benefit from any saving in Controllable Operating Expenditure, the Operating Rolling Incentive therefore subtracts from the total regulatory value an amount equal to that saving in Controllable Operating Expenditure that was made in the Formula Years after completion of period w. The Operating Rolling Incentive for each Review shall be calculated as follows:

$$ORI_B = g \cdot \sum_{t=0}^n \left(\sum_{y=n+1}^{t+w-1} O_{I,t} \cdot \frac{1 + r_{B,y} \cdot f_{B,y}}{(1 + r_B)^{y-n}} - \sum_{y=t+w}^n O_{I,t} \cdot (1 + r_{E,y} \cdot f_{E,y}) \cdot (1 + r_E)^{n-y} \right)$$

where:

- g is the Designated Parameter established at the preceding Review;
- n is a Formula Year as defined in Condition 4.4.4 for the Review in question;
- w is the Designated Parameter established at the preceding Review, and being the number of Formula Years for which the Licensee is entitled to retain an Incremental Saving;

$\sum_{t=0}^n$ is the summation of the results of the calculation within the large brackets in respect of each Formula Year t that occurs up until Formula Year $t=n$, where $t=0$ refers to the first formula year of the Review period (and, except in the case of the First Periodic Review, will be the same as $t=m+1$);

$\sum_{y=n+1}^{t+w-1}$ is, in respect of each Formula Year t , the summation of data in respect of the Incremental Saving (if any) first made in Formula Year t , for all the Formula Years (if any) y from $y=n+1$ to $y=t + w - 1$ (inclusive);

$$\sum_{y=t+w}^n$$

is, in respect of each Formula Year t , the summation of data in respect of the Incremental Saving (if any) first made in Formula Year t , for all the Formula Years (if any) y from $y=t + w$ to $y=n$ (inclusive);

$$O_{I,t}$$

is the Incremental Saving (if any) first made in Formula Year t . An Incremental Saving is said to have occurred in any Formula Year t in which the value of an Operating Saving in one Formula Year is greater than the value of the Operating Saving (if any) in the preceding Formula Year. The Operating Saving in each Formula Year is calculated (after the end of Formula Year t , and in respect only of those Formula Years to $t=a$) in accordance with the following calculation (and must be positive to be an Operating Saving):

$$O_{S,t} = O_{E,t} \frac{RPI_F}{RPI_E} - O_{F,t}$$

where $O_{E,t}$ is the Determined Controllable Operating Expenditure for Formula Year t ; and $O_{F,t}$ is the Actual Controllable Operating Expenditure for Formula Year t ; and

$$r_y, r$$

is either the Licensee's proposed value of the Designated Parameter (highlighted by use of the B subscript), or the established Designated Parameter (highlighted by use of the E subscript) for the rate of return to apply to each of the Formula Years within the relevant period. Provided that, where the Licensee does not propose the same value for each of the relevant Formula Years, $(1 + r_B)^{y-n}$ shall be replaced with $(1 + r_{B,n+2}) \cdot (1 + r_{B,n+3}) \dots (1 + r_{B,t+w-1})$ and $(1 + r_E)^{n-y}$ shall be treated accordingly.

Calculating Capital Rolling Incentive

- 4.6.11 The Capital Rolling Incentive is an incentive that guarantees the Licensee a specific number of Formula Years (w) of benefit in respect of any savings in Capital Expenditure regardless of when the saving is made. Where Formula Year $n+1$ occurs

before the Licensee has had w Formula Years of benefit from any saving in Capital Expenditure, the Capital Rolling Incentive therefore adds to the total regulatory value an amount equal to that saving in Capital Expenditure that would have been made in the remaining Formula Years of period w . Where Formula Year $n+1$ occurs after the Licensee has had w Formula Years of benefit from any saving in Capital Expenditure, the Capital Rolling Incentive therefore subtracts from the total regulatory value an amount equal to that saving in Capital Expenditure that was made in the Formula Years after completion of period w . The Capital Rolling Incentive for each Review shall be calculated as follows:

$$CRI_B = h \cdot \left(\sum_{t=0}^n \left(\sum_{y=n+1}^{t+w-1} C_{S,t} \frac{r_{B,y}}{(1+r_B)^{y-n}} - \sum_{y=t+w+1}^n C_{S,t} \cdot r_{E,y} \cdot (1+r_E)^{n-y} \right) + \sum_{t=n-w+1}^n C_{S,t} \frac{r_{B,t} \cdot f_{B,t}}{(1+r_B)^{t+w-n}} - \sum_{t=0}^{n-w} C_{S,t} \cdot r_{E,t} \cdot f_{E,t} \cdot (1+r_E)^{n-(t+w)} + DI_B \right)$$

Where:

h is the Designated Parameter established at the preceding Review;

\sum is the summation for Formula Years t or y (as the case may be) from the number below the summation sign to the number above the summation sign (inclusive), where $t=0$ refers to the formula year of the Review period (and, except in the case of the First Periodic Review, will be the same as $t=m+1$);

$C_{S,t}$ is the Capital Saving (if any) made in Formula Year t . A Capital Saving is calculated (after the end of Formula Year t , and in respect only of those Formula Years to $t=a$) in accordance with the following calculation (and must be positive to be a Capital Saving):

$$C_{S,t} = C_{E,t} \frac{RPI_F}{RPI_E} - C_{F,t}$$

where $C_{E,t}$ and $C_{F,t}$ are the Determined Capital Expenditure and the Best Actual Capital Expenditure (respectively) for Formula Year t;

$D_{E,t}$ is the Determined Annual Depreciation for that Formula Year; and

DI_B is the Best Available depreciation component modifying the incentive adjustment calculated according to the following formula:

$$DI_B = d \cdot \left(\sum_{t=0}^{n-w} C_{S,t} \frac{w}{l} \cdot (1 + r_{E,t} \cdot f_{E,t}) \cdot (1 + r_E)^{n-(t+w)} + \sum_{t=n-w+1}^n C_{S,t} \frac{w}{l} \cdot \frac{1 + r_{B,t} * f_{B,t}}{(1 + r_B)^{t+w-n}} \right)$$

where d and l are the Designated Parameter established at the preceding Review.

Condition 4.7: Special Reviews

- 4.7.1 The Determination Values and Designated Parameters established at a Review will remain unchanged until the Authority modifies Condition 4.11 in accordance with Articles 14(8) – (10) of the Order.
- 4.7.2 Notwithstanding Condition 4.7.1:
- (a) the Authority may (after consultation with the Licensee) determine a new value for the Designated Parameter *n* (thereby triggering a Special Review) following the occurrence of any one or more of the events referred to in Condition 4.7.4; and
 - (b) where a new value is so determined, the value of the Designated Parameter *n* in Condition 4.11 shall be modified accordingly in accordance with Article 10(5)(b) of the Order.
- 4.7.3 The Licensee may, by written notice to the Authority, require the Authority to determine a new value for the Designated Parameter *n* in accordance with Condition 4.7.2 where the Licensee can demonstrate to the Authority's reasonable satisfaction that any one or more of the events referred to in Condition 4.7.4 have occurred.
- 4.7.4 The events referred to in Conditions 4.7.2 and 4.7.3 are that, at the time the Authority chooses to make a determination (in the case of Condition 4.7.2), or at the time the Licensee serves the relevant written notice (in the case of Condition 4.7.3):
- (a) the Actual Volume in the preceding Formula Year differed by a factor of 15% (or more) from the Determined Volume adjusted to take account of weather conditions (including temperature variability) in accordance with such rules as are approved by the Authority from time to time;
 - (b) the Actual Operating Expenditure in the preceding Formula Year differed by a factor of 15% (or more) from the Determined Operating Expenditure after taking into account the effect of the Uncertainty Mechanism Opex Adjustment; and

- (c) the Licensee's obligations under Condition 3.2.1 have not been, or can reasonably be expected not to be, complied with.

4.7.5 Where, and at the time that, the Authority determines a new value for the Designated Parameter n in accordance with Condition 4.7.2:

- (a) if the sixth month of the then current Formula Year has not yet ended, the Formula Year determined as n by the Authority shall be the then current Formula Year; or
- (b) if the sixth month of the then current Formula Year has already ended, the Formula Year determined as n by the Authority shall be the immediately following Formula Year.

4.7.6 A Special Review will (like a Periodic Review) establish revised Determination Values and Designated Parameters. However, (unlike a Periodic Review) a Special Review shall be undertaken to establish new values for (and the Licensee shall provide Best Available Values and proposed Designation Parameters for) only such Determination Values and Designated Parameters as the Authority and the Licensee agree (or, in the absence of such agreement, as the Authority directs), and the values of the other Determination Values and Designated Parameters established at the last Review shall remain unchanged. The Licensee shall provide the required information in accordance with such timetable as the Authority may direct.

Condition 4.8: Type of price control

Shift of price control from a price cap to a revenue cap

- 4.8.1 The preceding Conditions of this Part 4, in particular Condition 4.2, set out a “price cap” form of control under which the Licensee is restricted as to the total revenue recovery based on the determined tariffs P_i , by category i .
- 4.8.2 This form of price cap control establishes an incentive on the Licensee to increase revenues. However, as the Network become more mature, such an incentive will no longer be necessary. The intention of the Authority at the date of the Grant is to modify the Conditions at an appropriate point in time to adopt a “revenue cap” form of control under which the Licensee will be restricted as to the total determined conveyance revenue ($\sum p_i v_i$) that it can recover.
- 4.8.3 The Authority:
- (a) will review whether the form of control shall be modified from a price cap to a revenue cap five years after commencement of the Licence; and
 - (b) in the event that the form of control is not modified in consequence of that review, will further review whether the form of control shall be modified from a price cap to a revenue cap at each subsequent price review.

Condition 4.9: Postalised Conveyance Tariff

Introduction of a Common Low Pressure Conveyance Tariff

- 4.9.1 The preceding Conditions of this Part 4 set out the basis for the restriction of conveyance charges in accordance with the price control of the Licensee.
- 4.9.2 The intention of the Authority at the date of the grant of the Licence is to modify the Conditions (together with the conditions of gas conveyance licences of other licence holders) at an appropriate point in time in order to mandate a common low pressure gas conveyance tariff across Northern Ireland under which every class of customers (e.g. domestic) will be subject to the same conveyance tariff regardless of location.
- 4.9.3 Under any such modified Conditions, it is the intention of the Authority at the date of the Grant that tariffs for the low pressure conveyance of gas would be set to recover an amount of revenue equal to the aggregate allowed revenue of the Licensee and all other relevant licence holders. The collected revenue would be placed in a common pot before being allocated to each licence holder in accordance with its allowed revenue for that year.
- 4.9.4 Within a timescale to be determined and specified by the Authority, the Licensee shall:
- (a) in conjunction and co-operation with the Authority and other relevant licence holders, develop proposals for the creation of such a common tariff; how this would function and to facilitate such implementation; and
 - (b) take all reasonable steps to facilitate the creation and introduction of that common tariff.

Condition 4.10: Reporting Requirements

Statements & Other Information

- 4.10.1 Following each Formula Year t , the Licensee shall give to the Authority a statement, at a time, in such form and accompanied by such supporting information (including an appropriate statement from its auditors in the form specified in Condition 1.2.6) as the Authority may direct, setting out the Actual Values for each of the factors for which Determination Values were previously established and in respect of those Formula Years during which the price control set out in this Part 4 has applied up to and including Formula Year t .

Pricing Information

- 4.10.2 At least two months in advance of setting the Controlled Charges in respect of Formula Year t , the Licensee shall give to the Authority a statement, at a time, in such form and accompanied by such supporting information as the Authority may direct, setting out:
- (a) the Licensee's detailed charging proposals for Formula Year t ;
 - (b) the Formula Year t values used by the Licensee for each of the parameters referred to in the calculations that underpin the Primary Constraint and the Supplemental Constraint;
 - (c) a demonstration of how the Primary Constraint and the Supplemental Constraint applying to Formula Year t would be satisfied by the adoption of the Licensee's charging proposals;
 - (d) an explanation for any significant variation from zero in the value of $Z_{F,i,t-1}$ and an outline of the Licensee's proposals for reversing any positive value (accumulated over-recovery) or any negative value (accumulated under-recovery) in $Z_{F,i,t}$; and
 - (e) an assessment of the likely effect of the charging proposals on consumers, including in particular:

- (i) where those charging proposals would be likely to have different effects on different categories of consumers, an assessment of the likely effect on each such category; and
- (ii) where those charging proposals would give rise to Controlled Charges materially different from those in the previous Formula Year $t-1$, an assessment of the likely impact on consumers of the proposed change in Controlled Charges.

Business plans

4.10.3 The Licensee shall:

- (a) at least eighteen months before the date of commencement of each Periodic Review, submit to the Authority a business plan in such form and in such manner as may be specified by the Authority;
- (b) update the business plan from time to time to include such information and detail as required by the Authority in a direction issued to the Licensee; and
- (c) submit any updated business plan to the Authority in accordance with any timescales specified by the Authority.

Condition 4.11: Current Designated Parameters and Determination Values

4.11.1 The Designated Parameters to apply to the first Formula Year and in each subsequent Formula Year up to and including Formula Year n shall be:
