10 August 2017

Dear Lisa,

Re: Network Code Modification Proposal 006 – Implementation of a Forecasting Party within the Northern Ireland Transmission regime

Thank you for submitting the modification report for code mod 006 as required under Section 6 of the Code Modification Rules. We have reviewed the modification report and note that no responses were received during the consultation period.

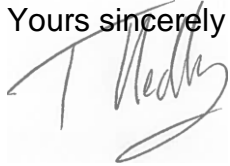

The changes proposed include:

- Amendments to reflect the details of the Forecasting Party Agreement between DNO's and Premier Transmission
- Minor amendments to reflect introduction of NI Gas Transmission Network Code (e.g.) update references to NI Gas Transmission Network Code
- Incorporation of the modified four stage emergency process included in the NINEC Safety Case

The proposed change will ensure consistency and transparency for gas suppliers who utilize both the high and low pressure networks in Northern Ireland.

This Code Mod 006 is approved, as of today's date. The modification is scheduled to be included in the Network Code from 30 September 2017.

Yours sincerely

Tanya Hedley
Compliance and Network Operations Director
