**Subject:** RE: proposed licence modifications for the tariff network code

Jillian,

Thanks for forwarding in advance of the consultation.

GNI(UK) understand the requirements behind the modifications and support the reduction of the current monthly multipliers to the multiplier bound of 1.5. This will have the effect of compliance with the TAR NC guidelines in this area, and will also ensure continuity with the use of these multipliers, which GNI(UK) believe best represents the efficient use and underlying costs of the network.

GNI agree with the reduction in the quarterly multipliers with the objective of representing the underlying costs and efficient use of the transmission system. The level of quarterly multiplier of 1.35 seems reasonable to GNI, based on the proposed movement in the monthly multipliers.

Please feel free to give me a call to discuss if required.

Regards,  
Con
