

Chapter 22 Regulatory accounts Current Cost Accounting

Covering:
Activity costing analysis Sewerage service

Chapter 22 Regulatory accounts Current Cost Accounting Activity costing analysis - sewerage service

This table consists of 33 lines within four main headings. It includes operating costs and capital maintenance costs. The information in this table is used for operating costs, trends analysis and for the compilation of unit costs which are published in the annual report 'Water and sewerage service unit costs and relative efficiency'. The reporting requirements relate to the appointed business and table 22 is no exception.

NI Water should also provide data relating to services provided by its PPP water contractor operated works. A commentary should be provided confirming PPP costs reported in lines 2 (power), 10 (direct costs i.e. payment by Concession company to Operating company), 11a (General and Support PPP Operator expenditure), 14 (Scientific services) and 21a (Total PPP unitary charge)). The PPP table commentary should also split the figure reported in line 10 into opex, capital maintenance and any operator profit.

Direct costs

These are costs that are directly attributable to each service activity, namely sewerage, sewage treatment, and sludge treatment and disposal. Such costs include apportionments, where such apportionments are necessitated by operational considerations (for example where mobile gangs are used to operate both water and sewerage activities). The direct costs incurred in the provision of general and support activities are given in total for the sewerage service and are also apportioned between service activities.

· Operating expenditure

The costs of subjective elements (i.e. rates, doubtful debts, or exceptional items) are included at the sewerage service level only, and are not apportioned between service activities.

Reactive maintenance

The costs of reactive maintenance expenditure on sewerage infrastructure and non-infrastructure assets, which are included within operating expenditure for each of the service activities.

Capital maintenance

The capital charges for each service category for infrastructure renewals expenditure, infrastructure renewals accrual/prepayment and current cost depreciation. Other capital charges are included at the service level only and are not apportioned between service activities.

Please note that the current cost depreciation charge, as defined in this table, is the gross figure, i.e. before the amortisation of deferred credits. This figure is not the same as the current cost depreciation charge stated in table 29 line 5.

Company commentary

Allocation of costs: NI Water must explain the basis for allocation of costs between opex, capex and capital maintenance; between water and sewerage services; and between service areas within the sewerage service. NI Water should clearly state any general allocation rules, which have been used by a company, their contractors or agents (e.g. a rule requiring the capitalisation of any expenditure greater than £100). NI Water should also detail any changes in judgements, apportionments or adjustments since the prior year, including changes to their capitalisation policies.

- It is important for NI Water to explain how costs related to business activities (particularly customer services/billing) and indirect costs (general and support expenditure, restructuring provisions and other atypical items) are allocated between the water and sewerage services; and
- It is important that all companies clearly explain the allocation of indirect costs between the individual service areas.

System and controls

NI Water should provide a commentary detailing the costing methodology and details of any developments and improvements made in the financial year. This should include an update of the development and implementation of relevant controls and an assessment of how effectively they are operating.

NI Water should highlight any significant internal control weaknesses identified during the year, including from internal audit findings, and their assessed impact plus details of processes implemented/ to be implemented to prevent such reoccurrences

Atypical costs and provisions: NI Water must reveal and explain all significant atypical costs and provisions which have occurred during the reporting year, regardless of whether or not they are declared as exceptional items. NI Water should report atypical costs net of any cost savings associated with the atypical event, for example a reduction in pumping and treatment costs due to lower distribution input during a drought.

- business restructuring costs including the Business Improvement Programme. (Please provide a brief description of the costs split between redundancy payments, pension contributions and consultants' fees etc.);
- compensation payments (for one-off events, but not standard GSS or customer charter payments);
- costs attributable to unusual weather conditions;
- · pension holidays; and
- rebates of Environment Agencyor other service charges, including rates.

In addition, NI Water must disclose the reasons for any exceptional items, which have been declared, and whether they are expenses or provisions for future costs.

NI Water must disclose the purpose and amount of any provision included in operating expenditure, and disclose the amount of provision expended or released in the reporting year.

Changes in costs: NI Water must explain all changes between the prior year (inflated) and reporting year in each element of operating expenditure, including reactive and planned maintenance, where the change in an element exceeds 2% of total operating expenditure, and explain fluctuations in any element of direct costs or operating expenditure which has changed by more than 30% of the prior year figure. An element here refers to a specific category of cost in a service area. So, for example, a change in power costs for the sewage treatment service area above the threshold would need to be explained, as would a change in materials and consumables for the sewerage service. If the total column for any category of

cost changes above the threshold, this will also need to be explained if it has not already been explained by changes in the individual service areas.

Total operating expenditure: NI Water must explain any difference between total operating expenditure as shown in table 22 line 21 and in table 36 line 21.

Pensions: NI Water should identify in the commentary the total element relating to pension costs reported in table 22. NI Water is also asked to set out the level of their actual pension contributions in the report year. NI Water should explain the procedure used to allocate pension costs between the water and sewerage service (where applicable). NI Water must also ensure that the actuarial assumptions underpinning the FRS17 valuation are made available to the Auditor on request.

If NI Water is using the multi-employer exemption under FRS 17, it should explain how reported costs in table 22 differ to those that would have been reported had FRS 17 been fully adopted.

Third party costs: NI Water should detail those costs which they have reported in third party costs, and confirm that any associated income has been reported as third party services in table 23. If costs have been allocated between third party and appointed business activities, NI Water should explain the basis on which this allocation has been made.

Sewerage infrastructure renewals charge (IRC): line 24 is the IRC made to the profit and loss account for the year. Please refer to company, reporter and auditor guidance. All commentary on IRC should be provided in chapter 33.

Donations to charitable trusts or other funds assisting customers with payment difficulties should be included in the customer services line (line 12), otherwise NI Water should state in which line they have accounted for the costs. NI Water must confirm how much they have paid to charitable trusts or other funds assisting customers with payment difficulties. Where the costs have been accounted for in different lines in previous years, please specify which line they have been included in and disclose the amounts.

NI Water must disclose in their commentary, fines paid or provisions made against Section 34 of The Street Works (Northern Ireland) Order 1995 for prolonged occupation of the highway. Preferably this should be reported in the other direct costs line, otherwise NI Water must state where they have accounted for the fines.

If fines were paid or provisions made in the report year these must also be recorded in the commentary.

Discharge costs should now be included in line 7 (service charges)

General and support costs

Line 10 of table 22 relates to general and support costs. NIW should provide a detailed breakdown of the costs included within general and support costs. This should include a table in the supporting commentary of the principal components of general and support costs in excess of £1m.

Employment costs

Line 1 of table 22 relates to employment costs. NIW should provide a detailed breakdown of the costs included within employment costs. This should include a table in the supporting commentary of all components of the principal components of employment costs in excess of £1m e.g. wages, salaries, pension, etc.

Hired and contracted

Line 4 of table 22 relates to hired and contracted costs. NIW should provide a detailed breakdown of the costs included within hired and contracted costs. This should include a

table in the supporting commentary of the principal components in excess of £1m e.g. consultancy, contractors etc.

Guidance to Reporters

Changes in costs: Reporters should check that NI Water has provided explanations on the reasons for changes and fluctuations in costs where the conditions noted in the above subsection apply. If they have not, reporters should comment themselves. In addition, reporters should give an opinion based on their knowledge of the business on NI Water's explanation of any significant changes in costs, particularly where they relate to changes in operating conditions.

Cost allocation: Reporters should comment on the appropriateness of NI Water's cost allocation procedures.

Sewerage infrastructure renewals charge: Reporters should refer to the reporter guidance in chapter 33. All commentary on IRC should be provided in that chapter.

Reporters should:

- check that NI Water has disclosed any donations to charitable trusts and other funds assisting customers with payment difficulties as requested, otherwise reporters should comment themselves;
- check that NI Water has disclosed the amount of fines paid or provisions made against Section 34 of The Street Works (Northern Ireland) Order 1995 for prolonged occupation of the highway. If not the reporter should comment themselves.
- if fines were paid or provisions made in the report year, check that these have been also been disclosed.

Guidance to Auditors

See separate guidance for auditors.

Column definitions

Column 1:

Sewerage: Include all direct costs associated with sewerage, including agency costs and routine maintenance. (Non-routine maintenance should be charged to general and support activities.) Exclude all costs associated with sea outfalls. Exclude terminal pumping costs (i.e. costs incurred in pumping to treatment works).

Column 2:

Sewage treatment: Include all direct costs associated with sewage treatment, including terminal pumping costs and routine maintenance. (Non-routine maintenance should be charged to general and support activities.) Include the costs of sewage exports, but exclude the cost of treating imported sewage. For these purposes, the latter costs should be estimated, and adjustments made to the appropriate subjective lines (and compensating adjustments made under Services provided for third parties). Include all costs associated with sea outfalls, except the costs of sludge disposal where sea outfalls discharge treated effluent, and sludge is disposed of separately.

Column 3:

Sludge treatment and disposal: Include all direct costs associated with sludge treatment and disposal, including routine maintenance. (Non-routine maintenance should be charged to general and support activities.) Include the cost of sludge exported, but exclude the cost of treating and disposing of imported sludge. For these purposes, the latter cost should be estimated, and adjustments made to the appropriate subjective lines (and compensating adjustment made under Services provided for third parties). See RAG 4.03 for description of activities.

Column 4:

Sewerage service total: where entries are required in columns 1, 2 and 3, column 4 is calculated from those entries.

Table 22 line definitions

SERVICE ANALYSIS – SEWERAGE

A DIRECT COSTS

1	Employment costs	£m	3dp	
Definition	The sum of the total costs of non-manual and manual manpower which are directly attributable to each of the individually identified service activities: sewage treatment and sludge treatment and disposal. To be included are the gross salaries and wages of all employees within the relevant activity, including payments resulting from bonus and profit-related payment schemes, employer's National Insurance contributions, superannuation, unfunded pension liabilities, sick pay, sickness benefits, private health insurance, retirement awards, death in service benefits, private health insurance, retirement awards, paid leave, subsistence, travel, entertaining and conference expenses.			
Primary Purpose	Informing relative performance and efficiency assess	ments.		
Processing rule	Input			
Responsibility	Comparative Efficiency and Performance			

2	Power	£m	3dp
Definition	All energy costs, including sewerage agency power of climate change levy, other than energy used for transferency costs, including the climate change levy, assorthe provision of depots and offices (which are included and support activities), which are directly attributable the individually identified service activities: sewerage, treatment and sludge treatment and disposal.	sport an ociated ved in Ge to each	d with neral of
Primary Purpose	Informing relative performance and efficiency assess	ments.	
Processing rule	Input		
Responsibility	Comparative Efficiency and Performance		·

3	Agencies	£m	3dp
Definition	All costs of subcontracting sewage services to local a which are directly attributable to each of the individual service activities: sewerage, sewage treatment and streatment and disposal. The power costs incurred by agencies should be included in line 2, not in this line. All other subcontracted sewerage services are included and contracted services.	Illy iden ludge sewera	tified ge
Primary Purpose	Informing relative performance and efficiency assess	ments.	
Processing rule	Input		
Responsibility	Comparative Efficiency and Performance		

4	Hired and contracted services	£m	3dp		
Definition	All hired and contracted equipment and services, which are directly attributable to each of the individually identified service activities: sewage treatment and sludge treatment and disposal. (Hired services include the hire of vehicles and plant, which is included in general and support activities). Contracted services exclude all contracted labour; professional advice (such as lawyers and consultants); computer software; and local authority contracts for the collection of water and sewerage charges. (The provision of services by associated companies is dealt with in line 5.) Informing relative performance and efficiency assessments.				
Primary Purpose	Informing relative performance and efficiency assess	ments.			
Processing rule	Input				
Responsibility	Comparative Efficiency and Performance	•			

5	Associated companies	£m	3dp
Definition	The total cost of associated companies which are dirattributable to each of the individually identified service sewage treatment and sludge treatment and disposa. If the total cost of all hired and contracted services from associated companies (excluding services that are calcincted in infrastructure renewals expenditure or prepayment/accrual) exceeds 20% of the total operate the appointed business, before interest and tax, then must be analysed across the headings of the segment as if the sub-contracted activities were carried out by Appointee. If the total costs of such subcontracted set below this limit then NI Water may, instead of the foreanalysis, identify their total cost as a separate and activities.	ce activi	ed or t of osts lysis
	component of the segmental analysis within the com-

B OPERATING EXPENDITURE

12	Customer services	£m	3dp
Definition	Customer services Total costs directly associated with customer services, except for current cost depreciation. Include the customer accounting, the reading of meters, debt recovery, customer enquiries relating to tariff matters and charging/billing, and complaints handling. (The costs incurred within the water distribution and sewerage activities in dealing with complaints about matters, other than those related to tariff changes and charging/billing should be recorded within those activities.) The cost of billing services purchased should be included but the costs of services provided for third parties excluded. For these purposes, the latter cost should be estimated and adjustments made to the appropriate subjective lines (and compensating adjustments made under Services provided for third parties). Include donations made to charitable trusts assisting customers or to other funds assisting customers with payment difficulties.
