

I need a supply of electricity but I am unable to pay the £30,660 required by NIE.

I am a lone pensioner with many health problems but I value my independence which is being impaired by the lack of a constant electricity supply. I have PVC solar panels and two small wind turbines which give me some power, but not enough.

At present I am living in one room because my house froze up over the cold spell. I hope to have the plumber in to fix broken pipes this weekend.

As I say I cannot afford the very high cost asked of me. The most I can afford is £2000.

I hope my comments will be put forward.

Yours,
