

Good day to you Ronan

We would like to confirm that we are in agreement and collaboration with the Powercon response, however have two specific comments that we would like logged under the response from Telestructure International, being

8.2.2 We do not agree that the functional specs will take time to develop

Question 9, we believe that the requirements of the CDM regs 2015 need to be incorporated in to the accreditation process, and only companies that can prove a certain level of accreditation or certification should be allowed to deliver competition in connections.

Regards

Andrew Prinsloo
