1. Introduction

1.1 Scope

This document describes the Retail Market Procedure for the Registration of an Interval metered new connection in Northern Ireland. Registration is required both for import sites and for export sites having import capability. The Procedure applies to Interval metered import sites. It contains the following sub-processes:

- **New Interval Metered Connection - Quotation Acceptance**
  - Describes the standard new connection application, quotation and acceptance process
- **New Interval Metered Connection - Registration**
  - Describes the submission and validation of the Supplier Registration Request
- **New Interval Metered Connection - Energisation and Completion**
  - Describes the completion of the meter works related to a new connection

This procedure excludes:

- New Non-Interval metered connections. (Refer to MP NI 5 New Non-Interval Metered Connection)
- New unmetered connections. (Refer to MP NI 27 New Grouped MPRN and MG NI 28 New Technical MPRN)
- Registration cancellation by a Supplier. (Refer to MP NI 3 Objections and Cancellations)
- Nomination by Suppliers of contracted generation. (Refer to MP NI 7 Generator Nominations)
- Registration Requests received for registered Meter Point in an energised or de-energised state. (Refer to MP NI 2 Change of Supplier - Interval)

2. Procedure Description

2.1 New Interval Metered Connection - Quotation Acceptance

2.1.1 Process Flow Diagram

New Interval Metered Connection - Quotation Acceptance

1. Customer Contacts NIE Networks to Request New Interval Metered Supply
2. Send Application Form to Customer
3. Complete and Return Application Form
4. Send Quote to Customer
5. Accept Terms & Pay
6. Generate New MPRN (Assigned Status)
7. Send Letter to Customer
8. Complete Site Construction and Make Supply Live to Cut-Out

A1.1 Send in HV Agreement
A1.2 Register Receipt of Connection Card
A2.1 Send in HV Agreement
A2.2 Register Receipt of HV Agreement

</tr>
</thead>
</table>
| 1 - 3| Customer        | A Customer, or their authorised agent, can contact NIE Networks directly to request an application form for a new Interval metered connection, and NIE Networks will send out the form to the Customer. Alternatively the Customer can download the application form from the NIE Networks website. The Customer must complete and sign the form, and return it to NIE Networks along with any additional required documentation, e.g.  
  - Stamp approved full planning approval for the development (if required)  
  - Site plan 1:500  
  - Site location map 1:2500  
  - Floor plan showing the proposed meter position  
  
  The complete list is defined in the Application Checklist on the application form. | Application Form to NIE Networks |
| 4    | NIE Networks    | On receipt of a completed, signed application form and all additional documentation, NIE Networks will carry out a design for the connection and send a quotation for the work to the Customer. An MPRN is created but will not at this stage be available to the Market Website. The quotation letter will contain  
  - Their new MPRN(s)  
  - The connection voltage, agreed MIC, MCC and type of metering to be installed  
  - Information regarding the need to obtain a Supplier before the connection can be energised  
  - Information on where Supplier details can be obtained  
  - The next steps in the process.  
  
  The quotation is valid for 90 days.  
  
  NIE Networks may need to carry out a detailed site survey before issuing the quotation. NIE Networks will make arrangements with the Customer first if this is required.  
  
  This design process can take between two and twelve weeks. | Quote to Customer                  |

</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Supplier</td>
<td>A Supplier may determine the characteristics of a Meter Point by reference to information published on the Market Website (see MG NI 23 Supplier Data Requests). The Supplier will request Registration of a Meter Point by providing an application to NIE Networks via a Registration Request market message, completed in accordance with the message implementation rules. Read Arrangements must not be specified for a new connection. The MPRN will have been provided to the Customer as part of the Quotation Acceptance activities between the Customer and NIE Networks.</td>
<td>010 to NIE Networks</td>
</tr>
<tr>
<td>2</td>
<td>NIE Networks</td>
<td>NIE Networks will determine that the Registration is a metered New Connection Registration and, if so, validate the Registration (see section 2.3.3 New Connection Registration Validation). A Registration that is received after energisation, other than by a Supplier as required in section 2.4.1, will be treated as a Registration for a Change of Supplier and will be processed as provided in MP NI 2 Change of Supplier Interval.</td>
<td></td>
</tr>
<tr>
<td>A1</td>
<td>NIE Networks</td>
<td>Where a New Connection Registration Request market message fails validation NIE Networks will send a New Connection Registration Rejection market message to the Supplier. The market message will contain one or more Reject Reason codes to indicate the reason(s) for the rejection. New ConnectionRegistrations can supersede each other. Where a subsequent valid New Connection Registration Request is received and the Meter Point has not been energised, then the initial Registration will be rejected and a rejection message 101R sent to the supplier that initiated the existing process.</td>
<td>101R/102R to Supplier</td>
</tr>
</tbody>
</table>

<th>Interface</th>
</tr>
</thead>
</table>
| A2   | NIE Networks    | Where the Registration Request market message is accepted but there are outstanding actions, NIE Networks will send a New Connection Provisional Acceptance market message to the Supplier. The market message will contain one or more Provisional Acceptance Completion Requirement Codes to indicate the actions that are awaited, including:  
  - Energisation is awaited  
  - Connection Agreement required for connections at HV or where the Supply Agreement does not cover Customer acceptance of the NIE Networks Connection Conditions. | 101P to Supplier |
| A3   | NIE Networks    | NIE Networks will complete any outstanding actions.                                                                                                                                                      |                   |
Retail Market Procedure NI 6 – New Interval Metered Connection

2.2.3 New Connection Registration Validation

A new connection registration request for a new interval metered connection will be rejected and the New Supplier advised if:

- The MPRN does not exist
- The Meter Point status is Terminated. Note that a Registration for a registered site in an energised or de-energised state is treated as Change of Supplier
- The Meter Point Address Postcode provided does not exactly match the data held by NIE Networks; where such data is held by NIE Networks. The matching is case sensitive.
- The Supplier ID is not recognised by NIE Networks
- The Supplier ID and Supplier Unit combination is not recognised by NIE Networks for the required date
- The SSAC is not a valid arrangement for the Supplier Unit with respect to the Settlement Class of the Meter Point
- The Supplier has not confirmed that a Supply Agreement exists with the customer. Where the Supplier has an agency agreement for LV connected customers this must include a clause to cover customer acceptance of NIE Networks Connection Conditions
- A registration request for a trading site is not consistent with registration data obtained from the SEM-O under SEM Agreed Procedure 1

Where import at a participant generator is to be registered as part of a trading site Supplier Unit then NIE Networks will not proceed with the registration unless and until:

- The SEM-O has verified that the proposed trading site Supplier Unit Registration is consistent with the Supplier Unit Registration for the Generator Unit that the Supplier has submitted, and which has been accepted by, the SEM-O
- The energisation date for the Registration is consistent with the date advised by the SEM-O for the proposed Trading Site Supplier Unit registration

Where NIE Networks is unable to proceed with the Registration due to inconsistency with data held by the SEM-O, NIE Networks will reject the registration request.

Note: the NI Market Implementation Guide – Meter Registration provides validation and allowable values at a message field level.

2.4 Supplementary Information

2.4.1 Default Supplier

The default Supplier will be required to submit a New Connection Registration Request to NIE Networks where NIE Networks identifies a metered connection at which electricity is consumed but which is not registered to a Supplier and for which a Registration Request is not received from another Supplier within five business days of an MPRN being advised to the Customer by NIE Networks. NIE Networks will in this scenario perform a Fieldwork visit to check and confirm the metering.

For unregistered existing connections the effective date of the Registration will be the date of the Fieldwork visit. Monies in respect of consumption prior to the effective date will be handled through Revenue Protection procedures.
